

How does it work?

When the user purchases a credit for the use of the Wi-Fi network, the vending machine prints a ticket with an access password generated by the Server that will be valid during the contracted time.

From this moment the user can access the Wi-Fi network by introducing the obtained password in the initial sever web-page.

Accepts coins as well as bills

Double lock / Double security

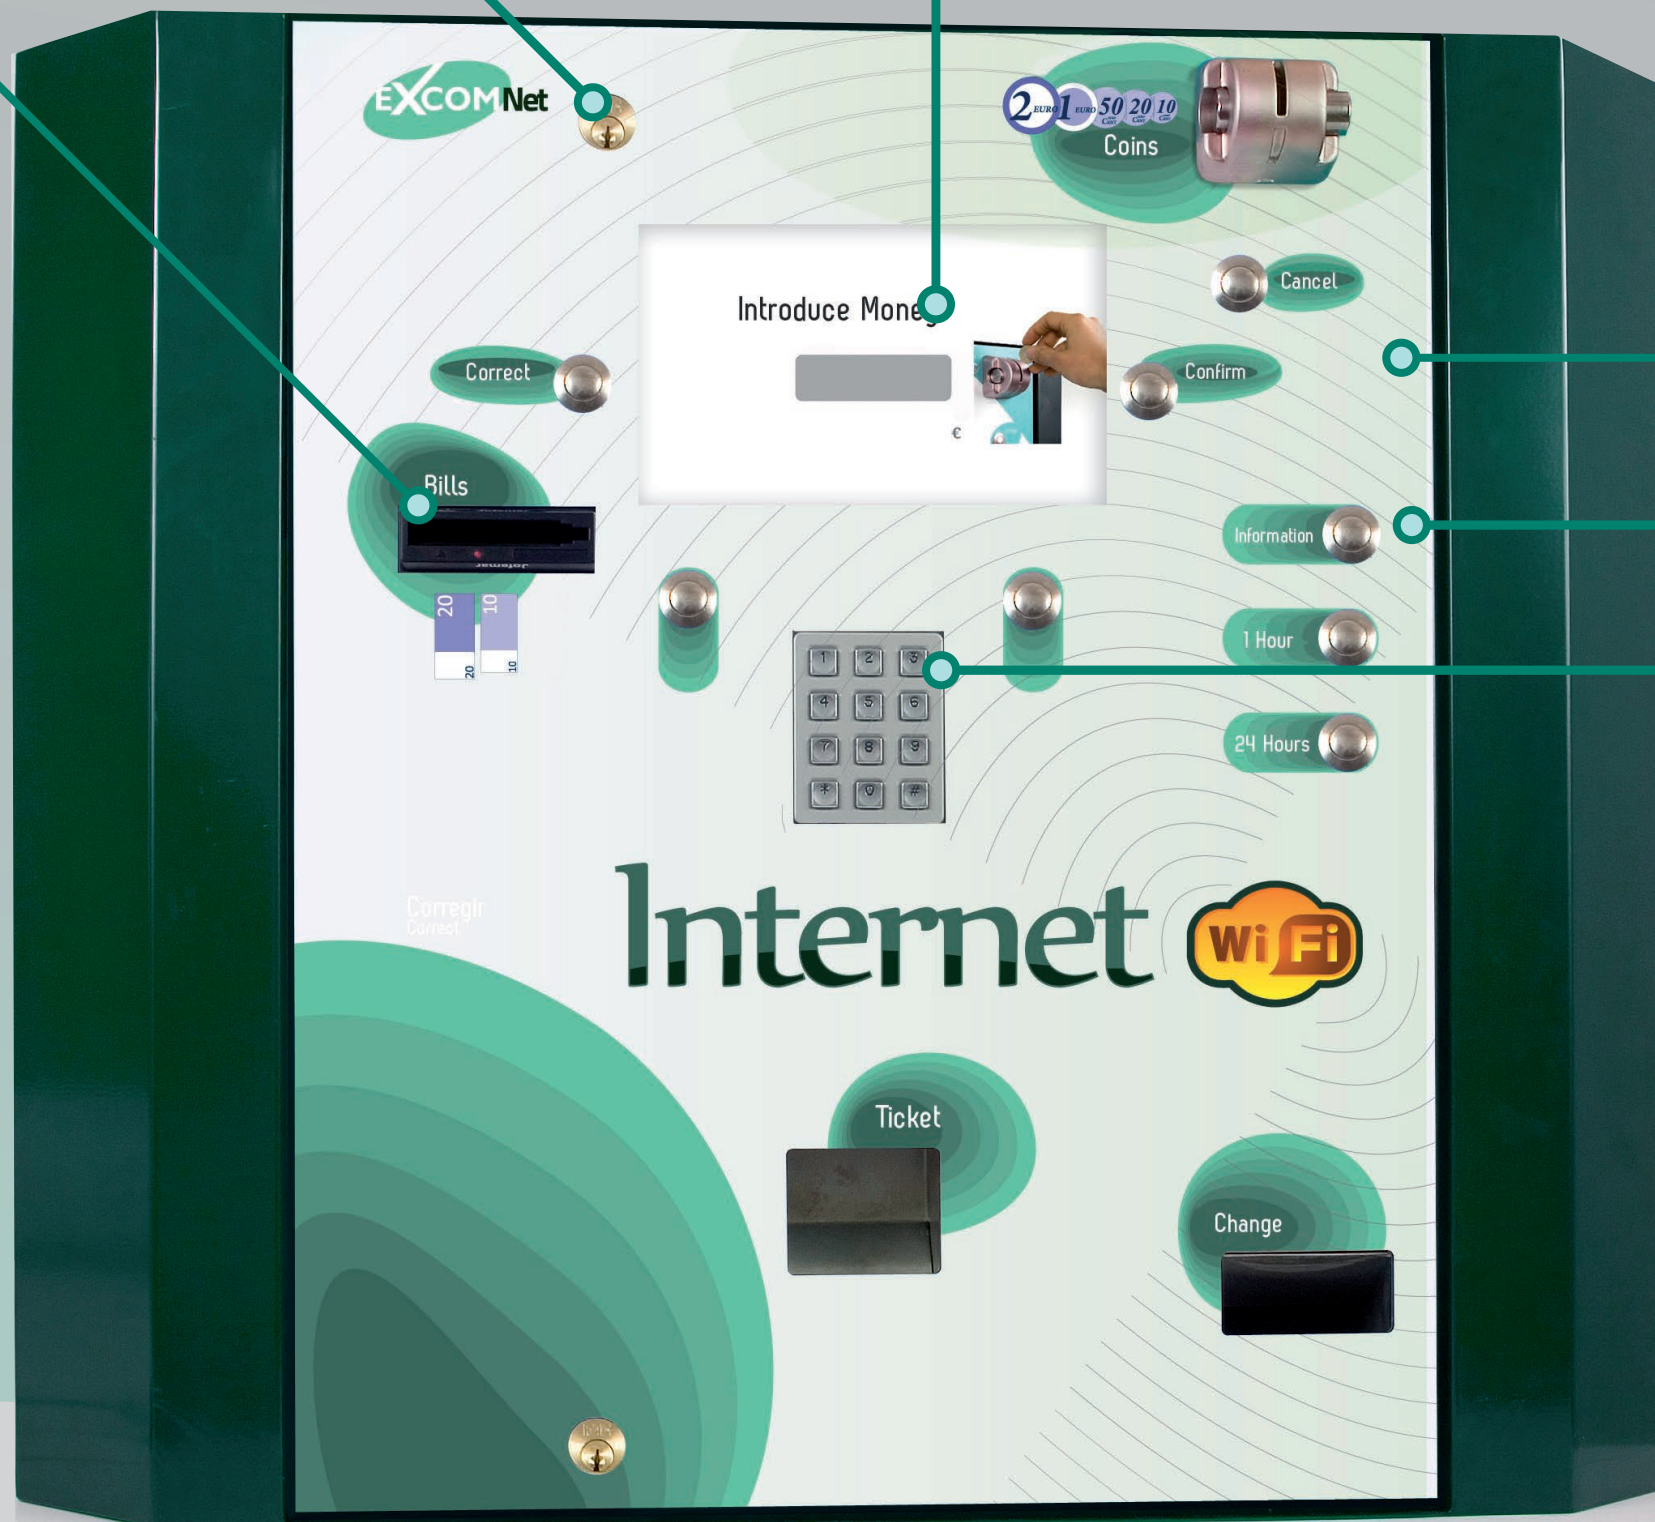

Color 7" TFT display

Configuration

Configurable colours

Messages language configurable for each country
